BiO 330H laminator

This is a high speed laminator designed for heavy duty and professional purpose, suitable for photo shop, office, school,....
"Clean Work Environment" and ISO 14001 certified, production from lead free materials. Equipped with six CERACON heater rollers and DC motor, this laminator transfers the heat quickly and steadily into each roller and runs the roller smoothly, so that you can get a fine lamination result every time. Microprocessor control system, optimum laminating temperature and roller speed are able to be automatically selected, appropriated for various types of lamination. User can be protected in case of accident such as electrical shock and heat from the laminator, as all covers are made of industrial type plastic. Power saving due to the lower operating temperature and automatic control of speed and temperature, Soft Touch control panel & Alarm System, the signal light & sound alert appeared during the changes of mode.
